## SUMMARY

---

Software Developer with 6+ years of experience building secure, cloud-native backend systems in Java and Python. Proven track record delivering production-grade REST APIs, CI/CD pipelines, and infrastructure-as-code at IBM Canada across AWS, OpenShift, Docker, and Kubernetes environments. Adept at translating complex technical requirements into scalable, maintainable solutions with a strong emphasis on security, observability, and clean, testable code. **Government of Canada Secret-Level Security Clearance in progress.**

## WORK EXPERIENCE

---

### Software Developer, IBM | Ottawa, ON | Jan 2020 – Dec 2025

- Architected and implemented a secure REST API from the ground up with a threat-modeling mindset, incorporating JWT authentication and expiry, RBAC authorization, rate limiting, input validation, and structured audit logging — passing internal security audit with **zero critical findings**
- Spearheaded Ubuntu support for DLC by repackaging the existing RPM distribution as a DEB package through Gradle build script modifications, expanding compatibility beyond RHEL/CentOS to Debian-based enterprise environments and directly driving a **20% increase in deployments across 50+ clients**
- Engineered a Python automation tool that streamlined the development pipeline by scraping an external JFrog Artifactory repository, detecting version drift across hundreds of dependency files, and auto-applying updates — **saving several hours of manual checking per release cycle** and generating audit reports
- Led Java 8 to Java 11 migration using Maven and Spring Boot, improving system performance by 30%, remediating **critical CVEs**, updating cipher suite configurations to enforce stronger TLS defaults, and enabling modern framework compatibility
- Reduced DLC registration setup time by **80%** by re-engineering the registration script in Python and Bash that automates the connection between DLC and QRadar on CP4S, with secure TLS/UDP encryption
- Orchestrated DLC-to-QRadar connectivity on AWS using Red Hat OpenShift, containerizing QRadar components into Docker images and managing pods, Kafka messaging, and service orchestration via Kubernetes; provisioned and configured platform infrastructure using **Terraform and Ansible** as infrastructure-as-code
- Integrated **30+ enterprise protocols** (AWS, Azure, Okta, Apache Kafka) to improve cross-platform interoperability, enabling onboarding of new enterprise clients across cloud and SaaS environments
- Mentored **3 junior engineers**, led code reviews, and actively contributed to sprint planning and Agile ceremonies — building an internal best-practices wiki that reduced onboarding time by 30%

### Software Developer Co-op, IBM | Ottawa, ON | Jan 2018 – Aug 2018

- Developed and maintained customer-facing Java backend features for QRadar's event processing pipeline, contributing to real-time security event ingestion and routing for **1,700+ enterprise clients**
- Engineered and tuned PostgreSQL schemas for large-scale workloads, improving query performance by 20%
- Implemented logging infrastructure and metrics dashboards for QRadar's event processing pipeline, improving system observability and reducing mean time to debug across distributed components

### Testing Engineer Co-op, General Dynamics Mission Systems | Ottawa, ON | May 2016 – Dec 2016

- Conducted software (C/C++) and hardware testing for the **Sikorsky CH-148 Cyclone** military helicopter program, developing cross-functional test cases that improved defect detection rates across multi-team feature rollouts
- Delivered weekly QA reports highlighting 10+ key risk areas, directly informing engineering and leadership decisions and reducing test cycle ambiguity

## TECHNICAL SKILLS

---

**Languages & Frameworks:** Java, Python, Spring Boot, Spring Framework, Spring Security, Hibernate, REST APIs, SQL, Bash/Shell, C/C++, Groovy, HTML/CSS, JavaScript (Node.js), Angular

**Cloud & DevOps:** AWS (EC2, S3), Docker, Kubernetes, Helm, Red Hat OpenShift, Jenkins, GitLab CI/CD, GitHub Actions, Terraform, Ansible, JFrog Artifactory, VMware, IBM Cloud Pak

**Data & Messaging:** Apache Kafka, ActiveMQ, PostgreSQL, MySQL

**Security & Infrastructure:** TLS/SSL, SSH, TCP/UDP, SonarQube, IBM QRadar, Linux/RHEL/Ubuntu/Windows

**Observability:** OpenTelemetry, Prometheus, Grafana

**Testing & Tools:** JUnit, Mockito, Spock, Selenium, TestNG, Git, Maven, Gradle, Jira, IntelliJ IDEA

**AI:** GitHub Copilot, Claude Code, Hugging Face, RAG

**Architecture:** Microservices, MVC, MVVM, REST API Design

## EDUCATION

---

**Carleton University** – Bachelor of Engineering, Electrical | Ottawa, ON | Sept 2014 – Dec 2019

**Government of Canada Secret-Level Security Clearance** – In Progress
